These trusses are designed as individual building components to be incorporated into the building design at the specification of the Building Designer. See individual design sheets for each truss design identified on the placement drawing. The building designer is responsible for:
1) Temporary and permanent bracing of the roof and floor system and for the overall structure; 2)The design of the entire truss support structure including but not limited to headers, beams, walls, and columns; 3)All truss-to-structure connections; 4)Verification of design criteria including loading and compliance with design documents; 5)Any other responsibilities as outlined in the governing codes and standards. For additional guidance see the latest adopted jurisdictional publications and/or visit www.tpinst.org (USA) or www.tpic.ca (CANADA)
